

TRAUMA RESPONSE

Your Trauma Program's solution for improved management of trauma response.

Trauma surgeons are in short supply.

Estimates show that there are only about **3K** trauma surgeons in the US, **1K** less than the current demand.

TRAUMA TRACKER captures incoming trauma data and identifies the roles needed to respond, ensuring that you have the **right resources**, at the **right time**.

Every second counts.

Early intervention can save lives and prevent long-term health problems. The **sooner** a trauma patient receives treatment, the **better** their chances of **survival and recovery**.

TRAUMA TRACKER provides real-time access to data giving you the information you need to **quickly address** current or emerging **operational efficiency opportunities**.

Incomplete data does not allow for performance improvement.

There are **2.6M** hospital admissions for trauma in the US each year. This means that there are an average of **100K** each day.

TRAUMA TRACKER'S interface is designed for speed and efficiency, helping to minimize effort and **maximize data collection**.

HIGHLIGHTS

Automate the trauma response process through the seamless identification of responders and robust communication around trauma patients.

Accurate and complete data collection

Real-time access to trauma information

Reduction in collection & reporting times
