

CARE COORDINATION

CRITTRAC standardizes your care delivery and documentation at Code Blue events.

Code Blues happen, but not often.

On average, **290K** in-hospital code blues occur each year. **Variability in care** may occur because code blues are infrequent and high-stress situations.

CRITTRAC is designed to provide visual prompts guiding providers through ACLS guidelines and recording the event workflow to **standardize care delivery**.

Adherence with the Guidelines makes a measurable impact.

Every **10%** increase in adherence to the ACLS guidelines increases the likelihood of ROSC by **30%**.

CRITTRAC's patented, award-winning technology was **designed by critical care providers** to make it easy to Get with the Guidelines[®].

The past cannot inform the future, if undocumented.

A study of patient outcomes found that there were resuscitation **documentation errors** committed in **40%** of cases.

CRITTRAC's pre-defined and customizable selections of interventions allow for **quick, accurate** and **standardized** documentation, collecting **robust datasets**.

HIGHLIGHTS

Reduce variability during Code Blue rescue events to better coordinate care delivery and to introduce data collection efficiencies.

Visual prompts and real-time accuracy

Standardizes care delivery based on trusted guidelines

Robust datasets for analysis and process improvement
